ABSTRACT

Church Management system is web application to manage all day operations related to events for a Christian church. Main aim of this system is to help parish members to request for their certificates such as Baptism certificate, Marriage certificate, and Confirmation certificate. This system is also help to reduce paper work and storing such details in efficient and secure way.

System Overview

ADMINISTRATIONE ECCLESSIAE is website for Christian church. It enables the parish members to request for their certificates such as Baptism certificate, Confirmation(Chrismation) certificate and Marriage certificate and download from here.

   This website is useful to publishing or announcing event details, news updates, Holy mass schedules on weekdays and Sundays etc. It also facilitates a way for managing church related activities, generating reports on income and expense, details of organizations, Institutions etc. It stores and manipulate important details of parish members as well as church related information. User can also submit feedback on this system.

System Study
Future enhancement of this system is to store all the data in cloud so that anytime, anywhere it is accessible. It can store huge data in cloud so that it does not require any additional storage devices.
Analysis of Existing System
Almost every system is manual / semi-automated. It stores all the details as paper work.
Disadvantage: Difficult to store huge data for many years.

Design of new system
 Design of proposed system provides a way to store huge information on cloud as long as we want. This system also provides a way for sharing documents through internet and payments.

Module Specification
 They are mainly 3 modules Administrator, Priest and Authenticated users (Parish Members).
   1.Administrator Section

Admin may a single or more than one person who is officially appointed by parish committee. Admin has overall control of this website.

As this system has o registration section instead, admin will generate username and password for each parish members (Each home) and also entering personal details of parish members such as Baptism date, Baptism name, confirmation date, Marriage date etc. This module contains following tasks:

I. **Generate Username and password for all users**
In this section, admin will generate username and password randomly for each home belonging in parish using pre-recorded data.

II. **Approve and Add parish members**
In this section admin will approve and add parish members who finished or submit their details such as Name, Gender, etc. (filling the given form).

III. **Add Organizations**
This section allows the administrator to add organizations such as Mission league, SMYM, Mathrudeepthi etc.

IV. **Uploading photos and videos of evet that is conducted in church.**

V. **Providing certificates**
In this section admin will approve certificates for issue

VI. **View feedback**
Admin can view feedback submitted by users

VII. **Generate Reports on Income and Expense**

VIII. **Change Password**
This section provides facility to change password of the admin

IX. **Forgot password**
This section provides a way for resetting password. Admin need to enter a verification code which has been send to their mobile phones.

X. **Storing details of assets**

XI. **Approval of contribution from parish members**

2.Parish Priest section

This module will introduce the responsibilities of parish priest as follows:

I. **View income and expense details**

II. **View all parish member's details**

III. **Final approval of all certificates:**
Final approval of certificate for validation.

IV. **Change Password**

V. **Forgot Password**

VI. **View details of assets**

VII. **Update mass schedules**

VIII.   Update important announcements

IX.   Approve contribution of parish members

3.Authenticated users (Parish members)

I.   Edit Profile

Parish members can edit their profile except some specified details such as Baptism name and date, confirmation date and marriage date.

II.   Contribution

Parish members can contribute things or money to the church. This module allows parish members to specify their contribution and quantity. Parish members can contribute   things or money only when their request is approved by admin and parish priest.

III.   View profile of all parish members

This section provides details of all parish members including profile photo, name, home name and their contact number.

Project Profile

Project Title: Construction Management System

Operating System: Window 8.1

Frontend tool: php

Backend tool: Mysql

Editor: Notepad++

Purpose

The purpose of his project is to develop the user friendly and interactive website which will reduce the paper work, faster, easy work and save time.

Scope

The aim of the project is to build a simple, effective computerized church management system. It starts the process of generating username and password randomly for each home and collecting relevant details and requirement from the parish members. The scope of this application deals with the administrator of the software. The administrator here is the person who is appointed by parish committee, deals with the handling of addition, deletion of parish members, organizations, institutions etc.
